

Individual Reflection Week 3

What do I want to learn or understand better?

Now I understand more of Android studios and I can do the basics. However a problem that is coming is that we will have to design the app in android studios. This is something that I do not feel confident about right now, so in the future I want to have a better understanding of how this tool works when it comes to design. Right now I feel like there is no one in our group that knows exactly how to design the app in this tool, therefore I think that this is something we will have to figure out together. However, I have some knowledge from other tools, and this might help us.

I also want to gain a better understanding of how to code and connect to the database. Right now I haven't worked so much with this. However I believe this is something that I will work more with, and therefore I will learn some about it. Some of my teammates have already worked with this and I feel like they understand, therefore they can probably explain och teach me.

How can I help someone else, or the entire team, to learn something new?

I feel like we now have come to a phase where we have kind of the same knowledge in many tools. Now we all learn something new continuously, and I think that if we just work together and take some time to explain what we have done for each other, we all can learn some. For example, after I have done my user story I can explain for my teammates what I have done. This way, they can either learn something new from what I have done, or they can comment on my work with a potential improvement and therefore teach me something new.

What is my contribution towards the team's use of Scrum?

This week I have participated in the Scrum planning. We all updated the backlog together and I wrote some user stories together with the rest of my team. After this I wrote acceptance criterias for the user stories that I had. During the sprint I have then done all of my user stories and participated in the daily checkups. Last but not least I also was a part of the Sprint review and team reflection where I actively participated.

What is my contribution towards the team's deliveries?

This week I have finished two user stories. I have made an introduction page to our app and I have made a design for our app. The introduction page was something that our client saw as valuable. The design was a suggestion to the client with the aim to get some feedback for further work. We got really good feedback and I really feel that we have more information about what is valuable for our client towards the next sprint.
