

# Individual Reflection Week 1

## **What do I want to learn or understand better?**

I want to increase my understanding of the scrum process and how to implement it and work with it in an efficient way. I also felt like there were some new words to me, for example as user stories, and this week I want to understand them better and be able to use them myself. I also want to understand better how you estimate the effort a task requires and the effort the group will be able to perform. I believe that this is something we will get better and better at and it will be interesting to follow and see how our learning curve regarding this estimation looks. Besides all this, it would be interesting to understand better how one picks a good API for a specific project.

## **How can I help someone else, or the entire team, to learn something new?**

Since we are a mixed team I believe it is very important to be open minded, let everyone talk and listen to what everyone has to say. I think that we all can learn something from each other. However I also think that it is important to not be scared of questioning things or thinking outside of the box. I think that If I help the group and contribute to better communication, better teamwork and a more creative way of thinking I think that the whole team will learn many new things.

## **What is my contribution towards the team's use of Scrum?**

We have just started to discuss Scrum and the process, but I believe that I will be able to contribute with us following the structure and the process. I have gained some understanding about it, but I am still learning.

## **What is my contribution towards the team's deliveries?**

This week I attended the group session and worked with my new team for the first time. I also contributed to the social contract.
