

Individual Reflection – Week 4

Amanda Cyrén

What do I want to learn or understand better?

I feel like I'm getting more familiar with the Scrum workflow bit by bit, and I'm certain that the comprehension will develop throughout the whole project. The same goes for getting better at creating and breaking down user stories. In my last individual reflection, I stated that I want to get some basic understanding about our external client's software. I know have some understanding about how to fetch survey questions from our client via API. However, I still feel like I have a lot more to learn about the technologies we use in this project, and I will try to achieve this by discussing with my team members and reading up on the subjects on my own.

How can I help someone else, or the entire team, to learn something new?

As stated in my previous individual reflections, I will try to maintain an open and accepting group environment where questions are welcomed. If I find any good resources or solutions to the software that we are implementing I will share them with the rest of the group.

What is my contribution towards the team's application of Scrum?

I've contributed to the sprint planning, sprint review, team reflection and additional meetings with the team. This week I were the Scrum Master and had some extra responsibilities outside of the user stories, like scheduling meetings and writing meeting minutes. However, I feel like the role of a Scrum Master still is a bit vague for me, and I think I could have done a better job in the role.

What is my contribution towards the team's deliveries?

Same as the previous question. I also contributed to some user stories, like putting together some design suggestions for our external client to review and get our application to fetch some questions from our clients API. This week we have worked a lot together with the user stories, which I think has been beneficial since it makes it easier to exchange ideas and knowledge.
