

Individual reflection

Simon Holst

Week 1

what do I want to learn or understand better?

From the start of this project it becomes apparent that my front-end framework knowledge will not suffice for the product we intend to build. As soon as we get a more concrete picture of what type of project we will be creating, a suitable framework can be selected. It would presumably be beneficial to include some sort of workshop in our early sprints in order to even the knowledge field between team members.

how can I help someone else, or the entire team, to learn something new?

To arrange some sort of workshop for newly introduced frameworks and topics would be constructive in order to convey knowledge and insight. Another great asset is videos online.

what is my contribution towards the team's use of Scrum?

This early on my main objective is to respond as quick as possible and interact in the exercises in order to understand the concept better. As the course progresses I intend to pursue this approach and also apply the knowledge I obtain by "doing".

what is my contribution towards the team's deliveries?

The goal is to attain a reasonable amount of tasks; contributing to the team, while simultaneously not burn out. This will help us assess an achievable velocity. Although the quality of my deliveries are a high priority, giving a helping hand to a team member is just as important, since we work towards a shared goal.
