

# Individual reflection

Simon Holst

Week 4

## **what do I want to learn or understand better?**

Learning and understanding the Android Studio framework is an ongoing process, where I feel improvement in my understanding with each task I attempt to solve. Moving forward I will continue to extend my comprehension of Android Studio as well as MongoDB, a database framework our external client expressed value in incorporating into our application.

## **how can I help someone else, or the entire team, to learn something new?**

This sprint, with several team members attempting tasks slightly outside of their knowledge, Slack is a great tool in order to communicate different knowledge revolving around the issues that occur. While progressing in the project I feel this approach to be efficient in teaching each other. Another way to convey knowledge is brief Zoom calls where the person possessing the insight can give a verbal explanation of the matter.

## **what is my contribution towards the team's use of Scrum?**

This week I participated in the team's sprint planning, weekly check-ups as well as external client meeting, Sprint Review and Sprint Retrospective. I will continue attending as many activities as I can.

## **what is my contribution towards the team's deliveries?**

Finishing several User Stories pertaining to API calls, Android fragments and user interface design. As I become more comfortable with the tools we use I strive to be more and more independent in my work and contributions towards the team.
