

# Individual reflection

Simon Holst

Week 2

## **what do I want to learn or understand better?**

During this week I've got acquainted with the concept of Business Model Canvas. As the development progresses and we get a greater vision of the project, refining this model will continue to help me learn about the implications of using this notion.

## **how can I help someone else, or the entire team, to learn something new?**

Since the initial sprint hasn't been yet the main goal is to convey the most essential knowledge revolving around Git and Android Studio during our planned workshops throughout the scrum.

## **what is my contribution towards the team's use of Scrum?**

This week I've contributed to define the scope of which the project will take form. This will help us to easier define our initial user stories on monday to commence the development of the application.

## **what is my contribution towards the team's deliveries?**

After the first sprint the first actual deliveries in form of tasks will be apparent and concrete; as of now, having a meeting with the executive of the company, Ola, we work with defining his value propositions which will help us deliver quality right from the beginning.
