

Individual Reflection – Week 3

Amanda Cyrén

What do I want to learn or understand better?

Implementing Scrum in practice this week made me realize that there still are a few things I find unclear, so I want to further improve my understanding about Scrum and sprints. Creating and breaking down user stories for our project and our first sprint were a bit challenging and I want to get better at it, which I think is easiest to achieve by practice. I also want to get some basic understanding about our external client's software.

How can I help someone else, or the entire team, to learn something new?

By trying to keep an open and accepting group environment where everyone feels encouraged to ask questions and express their thoughts. There are new technologies to learn, like APIs and connections to external databases, and I think that we can all learn more by sharing our own knowledge, asking a lot of questions and discussing the matter with each other.

What is my contribution towards the team's application of Scrum?

I participated in our first sprint meeting where we tried to lay out a foundation for the project, wrote user stories for the product backlog and had our first sprint planning. During the week I have worked with my assigned user stories, primarily by pair programming. I also attended our group's workshop in Android Studio and Git and participated in the sprint review and the team reflection.

What is my contribution towards the team's deliveries?

I contributed to the planning for our sprint and user story writing for our product backlog together with the rest of the team. I also contributed with getting some user stories done, e.g., getting some initial fragments in place in our application. Lastly, I participated in our sprint review and team reflection.
