

# Individual reflection

Simon Holst

Week 8

## **what do I want to learn or understand better?**

Working with an external server, provided by Firebase, I want to get a greater understanding of how to communicate with their API and get the desired behavior for our notification needs. To do that a great resource is their own documentation, as well as general documentation pertaining Android Notifications.

## **how can I help someone else, or the entire team, to learn something new?**

This week user stories were accomplished on campus, which was a great opportunity to get help, as well as give ideas on solutions for problems. In order to further extend this benefit a closely connected collaboration on campus is proving itself to be very sufficient.

## **what is my contribution towards the team's use of Scrum?**

This week I've participated in all our meetings and reflected on our week's Sprint.

## **what is my contribution towards the team's deliveries?**

This week I and Philip collaborated on implementation of the application's notifications. In order to deliver value to our customer, we decided on using an external server to be able to send notifications to the users. Going forward a native implementation would be recommended in order to reduce our tech-stack and reduce the number of technologies involved in the project.
