

Individual Reflection Week5

Emma Stålberg 220429

What do I want to learn or understand better?

Last week I for example said that I wanted to learn even more about the scrum process and the structure, so that we can be more effective and so on. This week, I have asked some older students, with more knowledge about scrum, about some tips and tricks on how to use the scrum process better. They taught me a lot and I will try to use it as much as I can and also try to teach some of it to my other team members.

How can I help someone else, or the entire team, to learn something new?

As before, I try to share my knowledge and I try to answer questions when I am able to. This week, we split ourselves into a “design team” and a “coding team”. I was in the coding team, and to help the design team understand the code architecture better, my team really focused on documenting the process as well as the result by doing UML-diagram, javadoc and an explaining document. We also tried to explain it to them in a meeting, and we are open to all the questions they might have. I hope this helps them understand it.

What is my contribution towards the team's use of Scrum?

This week I was the scrum master. I have been responsible for setting up the meetings and chairing the meetings. I have also been responsible for the structure of the meetings so I have put together some templates for meeting protocols.

What is my contribution towards the team's deliveries?

I have been responsible for writing the meeting protocols and to hand in the team reflection. I have also actively participated in and completed my assigned user stories.
