

Individual Reflection – Week 3

Philip Winsnes

What do I want to learn or understand better?

I still want to learn the things I described in the earlier reflections. I would also like to understand Touch&Tell's stack and how we should work with them in a proper way. I really want to be fast with making good user stories with proper value proposition. I also want to be better at estimating velocity and how much our group can deliver per sprint.

How can I help someone else, or the entire team, to learn something new?

I refer to my answer for this question in week one. We have done workshops during this week. I have planned and teach out the basics of Android Studio for some group members to let them be familiarized with the framework. There have also been a workshop in git.

What is my contribution towards the team's application of Scrum?

On Monday the 4th I participated in a long meeting with sprint planning and grooming. Me and Fanny have been responsible for being the product owner this week. We have held a demo of our first sprint delivery to Touch&Tell. Wednesday the 6th I helped on specifying our Definition of Done. Friday the 8th we did our sprint review and team reflection.

What is my contribution towards the team's deliveries?

I have planned and teach some of the group members the fundamentals of Android Studio. I have also been developing the navigation within the app. The user stories I have worked on is TA-12, TA-41, and TA-43. This makes for a total estimate of 7.
