

Individual Reflection Week 2

What do I want to learn or understand better?

I still feel like I want to understand the different roles in, and the process of, Scrum. However I think this is something that will get clearer when we start working with it next week and implement it to our group. It is one thing to read about it, and another thing to actually implement it and use it. Besides this I also want to understand how we are supposed to break down the problems regarding our product in the best way, and how we can work with all the different “layers” in one slice. I feel like this is something that the group will have to work a lot with, and we really have to try to understand our problem and all the different parts of it before we start. I also want to gain a better understanding of the different programs that we will use and have it working on my own computer. Next week we will have some workshops and make sure that everyone feels familiar with every tool and that it is working correctly. I think this will help.

How can I help someone else, or the entire team, to learn something new?

I still believe it is very important to be open minded, let everyone talk and listen to what everyone has to say. The past week I have really felt that we are a good group and that everyone wants to participate and be active, which really helps. I feel like we are creating a good environment where it is okay to ask a question and say that you don't know anything or don't understand, and the ones that actually know will happily explain and try to make you understand. Therefore my contribution to the team is to try to keep this good environment.

What is my contribution towards the team's use of Scrum?

We have just started to discuss Scrum and the process, but I believe that I will be able to contribute with us following the structure and the process. I have gained some understanding about it, but I am still learning. I think we will see more next week which roles everyone takes in the use of Scrum. However I know that I will do my best to make everyone understand and to have a structure when working with it.

What is my contribution towards the team's deliveries?

This week I have been to all the lectures and I have updated myself on all the things that have been brought up during class. Therefore I feel like I have put down time on all the theoretical things, and given myself and the group the right prerequisites for next week more practical work. Besides this I have been to two meetings with our external customers, trying to understand their needs and how we can contribute and meet them.
