

# Definition of Done

- Classes and public methods are documented with JavaDoc.
- The code has been autoformatted in Android Studio.
- Names should follow the following conventions guideline:
  - Variables and methods should be self-explanatory and named in camelCase. ex: `myNiceVariable`
  - Static variables in capital letters and underscores. ex. `CONSTANT_VARIABLE`
  - Classes and methods in (capital) `CamelCase`
  - XML-files: all lowercase and underscore as space, ex. `activity_name`, `fragment_name`
  - Line comments should be on a separate line
- Every part of the app should work as expected by the documentation, and also be runnable.
- The contribution should be runnable and not break previously existing code.
- Code is tested and/or verified to be working as expected by the developer.
- All reasonable warnings given by Android Studio are resolved.
- Code is merged to the master branch.
- Each pull request has been reviewed and merged by someone not involved in the development of the specific user story.
- All acceptance criteria are completed.
- All finished branches are deleted.
