Individual Reflection – Week 5

Amanda Cyrén

What do I want to learn or understand better?

I think my team has a good application of the Scrum workflow. It feels like we are getting used to the process and have a good collaboration with each other. However, I would like to get better at estimating user stories, since I think our estimates have been a bit off. I will try to achieve this by carefully consider which problems might occur for certain user stories.

This week, a lot of my time has been spent on the design for the GUI for the application. For coming sprints, I would like to learn how to implement the design in a modular and efficient way into the app. I will do this by discussing with my team members and reading up on my own about Android design tools etc.

How can I help someone else, or the entire team, to learn something new?

My answer here is the same as previous weeks. We also decided as a team that it can be more efficient to ask for help straight away from another team member than putting a lot of time on trying to figure things out on your own. This could hopefully improve our velocity.

What is my contribution towards the team's application of Scrum?

This week I have attended all team meetings and contributed to the backlog grooming, sprint planning, sprint review and team reflection. I have delivered all my assigned user stories.

What is my contribution towards the team's deliveries?

Same as the previous question. I've contributed to producing and deciding on a final design for the application and all its current screens. I've also contributed to implementing a home screen for the app in Android Studio.
