Individual Reflection – Week 2

Amanda Cyrén

What do I want to learn or understand better?

I feel like I'm starting to get a better understanding about how Scrum works and how a sprint process is organized. However, I'm now at a point where I don't feel like I can develop a better understanding without implementing Scrum in practice. Therefore, I look forward to next week where we will have our first sprint and hopefully I will get an even better comprehension about the process. I'm certain that there will be a lot of questions and uncertainty in out first sprint, and I would like to learn to ease up on my need of control and embrace the process. I also would like to get better at formulating user stories and breaking them down as much as possible, since I believe that it can be a very challenging and time-consuming part of a sprint.

How can I help someone else, or the entire team, to learn something new?

For our first sprint I think that communication is extra crucial. By having an open dialog between all team members, I hope that we can get through the first sprint feeling somewhat satisfied and not too overwhelmed. I will provide help and support for my team members where I'm able to, e.g., with Git or Android Studio which seems to be the framework we're leaning at.

What is my contribution towards the team's application of Scrum?

I have further developed my understanding of Scrum by attending the weeks lectures and reading up some on my own, and I now feel somewhat ready for out first sprint that starts on Monday next week. I've also checked out Jira, which Emelie suggested we use for user stories, with the intention to familiarize myself with it till Monday.

What is my contribution towards the team's deliveries?

This week our main goal was to decide on a project and deliver a project scope. I've participated in the meetings we've had with the group and with our external client. I've also taken part in constructing the project scope.
