Individual Reflection Week 6

What do I want to learn or understand better?

This week I have worked with android studios and more specifically, with implementing the design. This did not include so much logic, however, some logic regarding the design will need to be implemented. This is something that I want to understand better. Next week, therefore, I want to be assigned some userstories regarding this together with someone in my group that knows more about it. This will probably increase my knowledge about this.

How can I help someone else, or the entire team, to learn something new?

This week we have really helped each other. We all sat together and worked with our own userstories. This made it possible for us to ask each other when we didn't understand, but still work individually. This increased my knowledge regarding my specific userstory, and at the same time I could look at my other teammates userstories and better understand what they were doing. I felt like this contributed to me gaining a better understanding of our whole product. The following weeks I hope that we can sit together again, because this really made it easy for us to help each other and share our knowledge within the group.

What is my contribution towards the team's use of Scrum?

This week I was Scrum master. When it comes to attending the meetings this week I have been a part of the sprint planning, the sprint review and the team reflection meeting. I have also participated in all the daily check-ups. When it comes to the use of Scrum, we all updated the backlog together and I wrote some user stories together with the rest of my team. After this I wrote acceptance criterias for the user stories that I had together with the other team mates that also was a part of these user stories.

What is my contribution towards the team's deliveries?

This week I finished all my assigned user stories. They were all regarding implementing our design from figma into android studios. Therefore I contributed to making our product look more appearing, which was something our client saw a value in.
