Individual Reflection Week 3

What do I want to learn or understand better?

I want to understand Android Studio more and I am currently working on it. We had a workshop this week and now I am clicking around, trying to get familiar with the tool. Besides this I want to gain a better understanding of how we should plan our print and estimate our velocity and the user stories. I also still want to understand how we are supposed to break down the problems regarding our product in the best way, and how we can work with all the different "layers" in one slice. I feel like this is something that the group will have to work a lot with, and we really have to try to understand our problem and all the different parts of it before we start.

How can I help someone else, or the entire team, to learn something new?

By workshops and by working together, sharing our knowledge. This week we had a workshop and I felt that it was a very good change for us to discuss the code and how we should work with it. If we work in pairs, or working while sitting together, I think that we all can help each other with all different things.

What is my contribution towards the team's use of Scrum?

This week I have participated in the Scrum planning. We all updated the backlog together and I wrote many user stories and epics together with the rest of my team. We then worked on our definition of done together. Besides this, I have done some user stories.

What is my contribution towards the team's deliveries?

I have done some user stories, however mostly with focus on understanding the tools we are working with since I wasn't familiar with them when we started. Besides this I have looked through the written code that was delivered. I also participated in the sprint review and the team reflection.
